

Remote operation

Remote operation saves labor and improves operation rate!

Problems

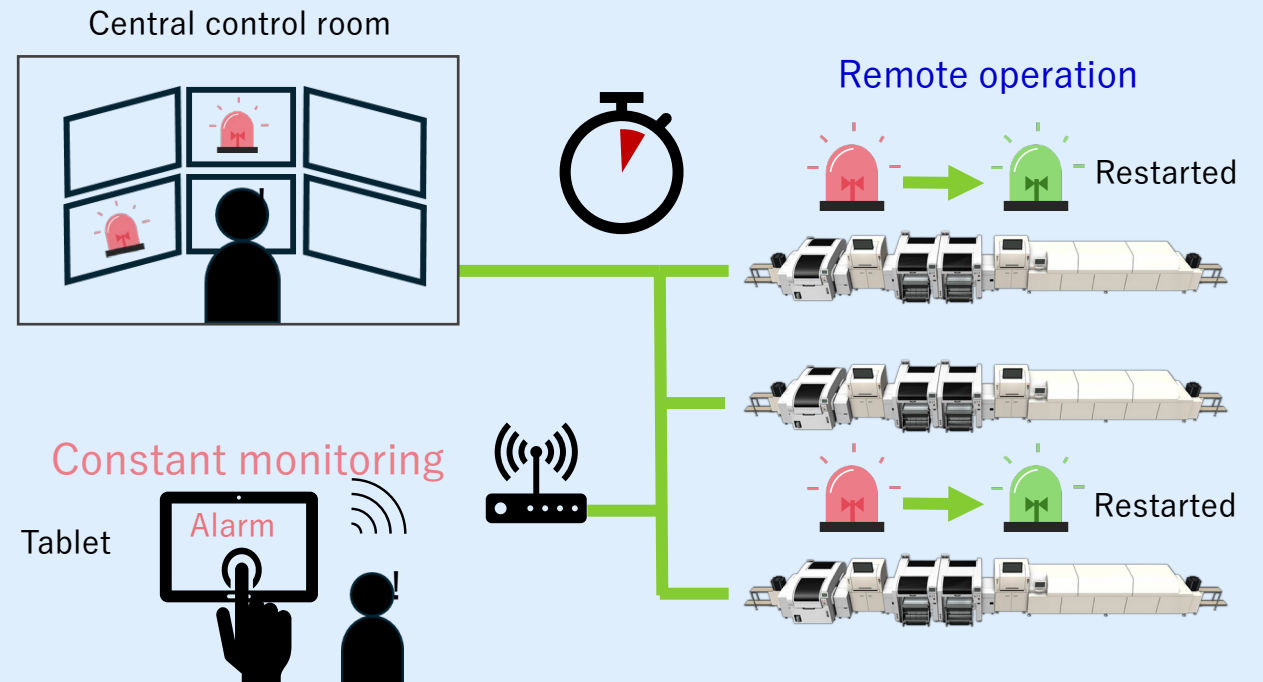

■ Alarm stopped!

It takes time to recover if there are few operators ...

Effects after license introduction

■ Alarms can be stopped remotely from a PC in the central control room or from a tablet.

Remote operation

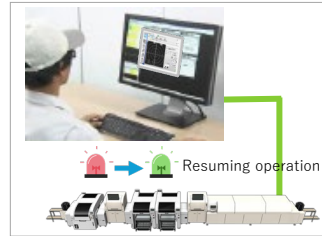

Remote operation saves labor and improves operation rate!

■ Main functions

Centralize equipment errors on remote terminals to reduce operators' delayed awareness of error signals and eliminate travel time to faulty equipment.

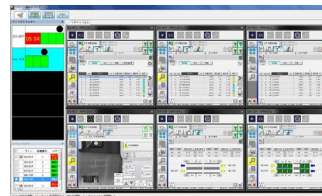

1. Remote operation function

- Recover equipment errors and restart production remotely.

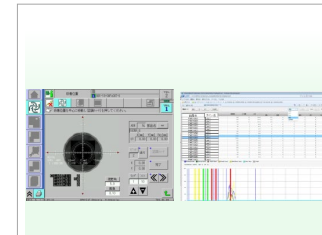

2. Remote reference function

- View live equipment status and on-site operator actions on-screen for real-time guidance.

3. Status monitor function

- At-a-glance display of remotely recoverable errors across managed lines.
